

Andrew Swirsky is a licensed professional engineer with Stantec specializing in the planning, modeling, design, rehabilitation, and construction of water, wastewater, and storm water facilities and systems. Andrew has a passion for utilizing existing databases and tools to streamline pipeline design and integration with modeling. Using his design and modeling experience, Andrew can analyze entire systems or focus down on specific projects and details. He also implements 3D design reviews for pipeline and facilities ranging from quick flyovers to immersive virtual reality environments. He has provided essential technical expertise and project management for a variety of clients including utility districts, towns, cities, and regional authorities.
